

# CHANGING CLIMATES @ COLORADO STATE 100 (Multidisciplinary) Views of Climate Change

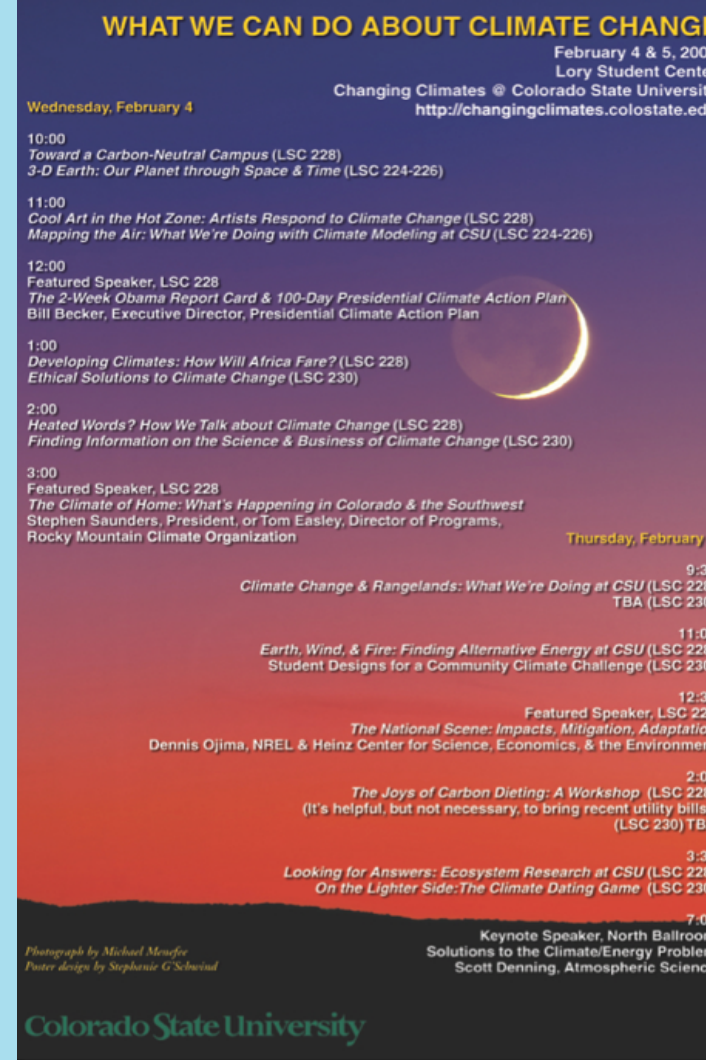

SueEllen Campbell and John Calderazzo  
Scott Denning, David Randall, CMMAP, and others

## CREATING CAMPUS CONVERSATIONS

We have run some 120 talks, by roughly 115 speakers, for nearly 7000 listeners.

Those speakers have come from 27 departments, all 8 CSU colleges, and many other entities on & off campus.

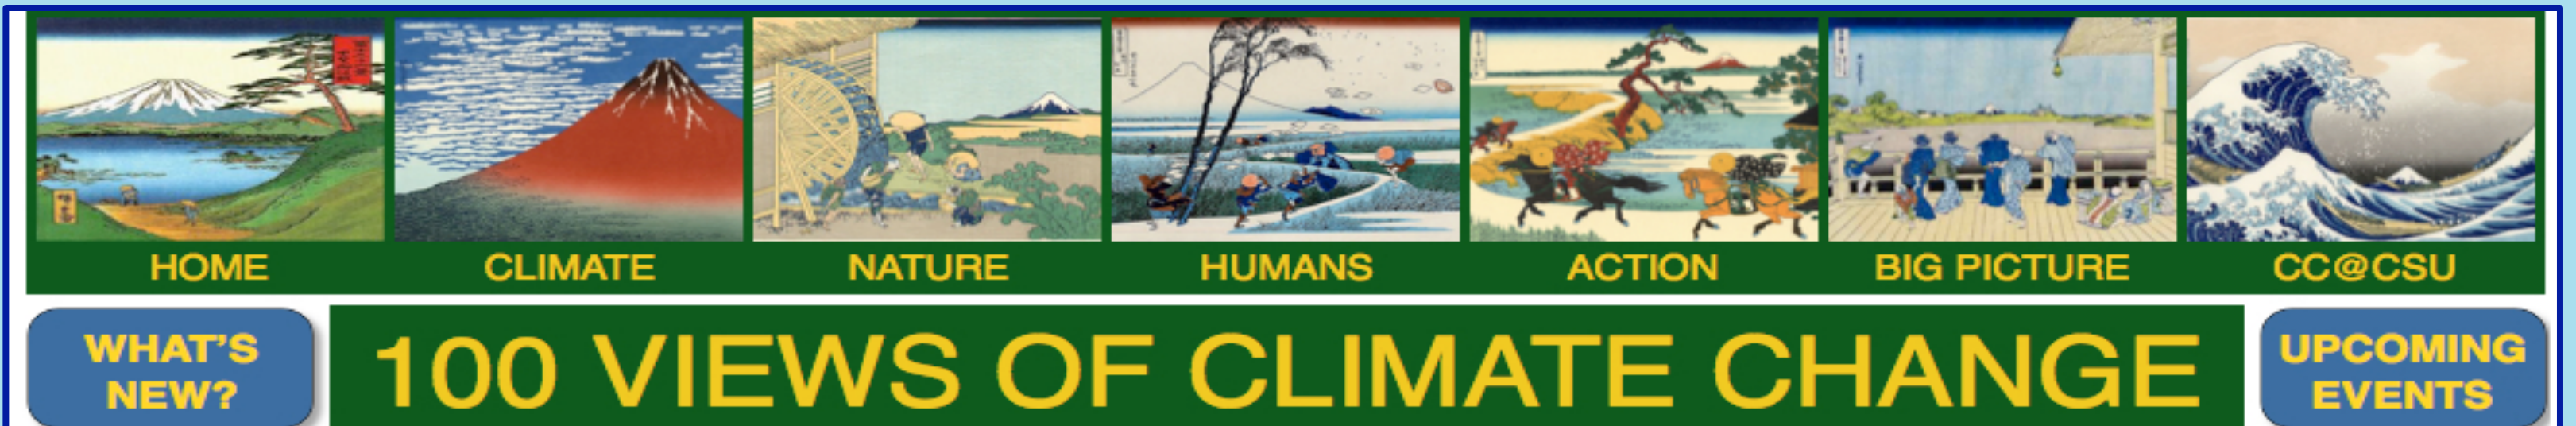

## COLLECTING AND CREATING RESOURCES

We offer college-level resources & primer-level clarity. Our website includes items we cull from other sites and annotate; some we tape from our campus talks; and some we are creating ourselves.

how climate works / how it changes  
what's happening / what may happen  
the ghosts of climates past  
how we know what we know  
natural ecosystems  
food  
the big picture

impacts on people  
ethics, art, literature  
communication  
daily life  
policy  
business & economics  
energy

## HELPING OTHERS COMMUNICATE

Talks and workshops for clearer communication about climate change to non-specialist audiences.

## SPREADING THE WORD

We have talked about this work at NSF headquarters, UCAR (50<sup>th</sup> anniversary), the Ecological Society of America, George Mason University, University of Maine at Orono (Climate Change Institute), events in Bloomington, Calgary, Chicago, Missoula, Victoria, Washington, and around Colorado . . . & written about it in *ISLE*, *The Face of the Earth*, *Thoreau's Legacy: American Stories about Global Warming*, *Matter Daily* . . .

**The Climate Itself**  
Clear, Current, High-Quality Resources  
Global climate change is everybody's business. It's a challenge so daunting and far-reaching, and so prone to misinterpretation, that it needs to be understood and tackled from as many different perspectives as possible. That's what this website is about.

**100 Views of Climate Change** takes inspiration from the 19th-century artist Hokusai, who created 100 Views of Mount Fuji, Japan's most sacred mountain. Though climate change is hard to "see" in the everyday sense, it looms over our lives as much as Fuji looms over the Japanese landscape.

Whether you're a college teacher, a student, an interested citizen, or a researcher, you'll find useful materials here in the form of short and long videos, notes about good books and articles, and links to key websites. We offer **clear, current, high-quality information about climate change**—on ethics and atmospheric science, economics and agriculture, literature and ecology, policy and refugees, and more.
