

# Grid-size dependence of shallow Cu simulations

Steve Krueger,  
University of Utah  
[steve.krueger@utah.edu](mailto:steve.krueger@utah.edu)

- Based on RICO case described by Abel & Shipway:  
*Q. J. R. Meteorol. Soc.* 133: 781–794 (2007)

# Grid-size dependence in a large-domain LES

---

- **RICO trade wind cumulus case:** 19 Jan 2005
- **University of Utah LES model (Zulauf 2001)**
- **Control simulation:** 100 m horizontal grid size, 40 km x 40 km domain, 24 h simulation
- **Grid-size dependence simulations:** 500 m, 1000 m, 2000 m, 4000 m horizontal grid sizes
- **Subgrid-scale turbulence length scale dependence simulations:** length scale is given on plots

$$(dx^*dy^*dz)^{1/3}$$
